FEDERAL BUREAU OF INVESTIGATION

ALL INFORMATION CONTAINED

HEREIN IS UNCLASSIFIED

DATE 01-05-2009 BY 65179 dmh /baw

Date of transcription 03/20/2002

[redacted] approximately [redacted] years of age, [redacted], United States Army Medical Institute of Infectious Diseases (USAMRIID), [redacted] Ft. Detrick, MD was advised of the identity of the Special Agent (SA) and the nature of the interview. Also present during the interview was Dr. BRUCE IVINS. [redacted] provided the following information:

b6
b7C

[redacted] started employment as a scientist at USAMRIID in [redacted] and has remained at USAMRIID since [redacted]

b6
b7C

[redacted]

b6
b7C

BRUCE IVINS introduced [redacted] to [redacted] IVINS began working at USAMRIID in the mid 1980s. At the time of IVINS' arrival at USAMRIID, scientists at USAMRIID were attempting to perform aerosol challenge experiments for vaccine testing. The preparations of *B. anthracis* spores being used were not pure, and the impurities in the preparations clogged the aerosolizer(s). IVINS used density gradients to purify chlamydia preparations when IVINS was working in North Carolina, and applied the technique to purification of *B. anthracis* spores.

b6
b7C

The clogging problem was also alleviated by growing the *B. anthracis* in liquid broth instead of agar plates. The use of agar plates contributes to debris contamination of the spore preparations, and liquid broth produces a very clean spore preparation. In addition, growth in liquid broth seems to yield a

b6
b7C

more virulent *B. anthracis* spore in contrast to spore produced on agar plates.

[REDACTED]

b6
b7C
b7D

[REDACTED] IVINS
believed that [REDACTED]
may use the density purification protocol.

[REDACTED]

[REDACTED] Production of a large amount of highly pure spores is relatively difficult process. There are several steps in the protocol where seemingly insignificant changes may cause the protocol to fail. These steps include harvesting the spores at an early stage in growth, protecting the cultures from light, the amount of culture aeration and potential overloading of the density gradients. The percent of the bacteria which undergo sporulation also varies between strains of *B. anthracis*. [REDACTED]

b6
b7C

[REDACTED] Some strains of *B. anthracis* germinate quicker than others, and the rapid strains do not produce good preparations of spores. The Ames strain is well suited for good spore production.

[REDACTED]

b6
b7C

Production of gram amounts of pure *B. anthracis* spores would require a large amount of laboratory area or time. For example, ten liters of liquid broth are required to produce one gram of pure spores. [REDACTED]

b6
b7C

[REDACTED]

279A-WF-222936-302, -LAB

Continuation of FD-302 of [REDACTED], On 03/19/2002, Page 3

[REDACTED]

b6
b7C

[REDACTED] It would be difficult for an inexperienced individual to produce a large amount of pure spores on a part time work schedule.

[REDACTED]

[REDACTED] In 1997, IVINS asked that DPG produce a large amount of *B. anthracis* Ames strain spores through a USAMRIID contract. USAMRIID required a large amount of spores, and DPG used fermentation processes to produce the large amount of required spores. DPG produced the spores as a wet paste, and sent the paste to IVINS. IVINS [REDACTED] resuspended the spores in 1% phenol water and either irradiated the spores or purified the spores on Renocal-76 density gradients. The resuspended spores were at a concentration of 3×10^{10} colony forming units (cfu) per milliliter.

b6
b7C

Several other individuals at USAMRIID also use [REDACTED]
[REDACTED] These individuals include

Date of transcription 04/26/2002

[redacted]
United States Army Medical Research Institute of Infectious
Diseases (USAMRIID), [redacted] Porter Street, Fort Detrick, Frederick,
Maryland, 21702 was advised of the identity of the Special Agent
(SA) and the nature of the interview. [redacted] provided the
following information:

b6
b7C

[redacted] advised that USAMRIID would aid the Federal
Bureau of Investigation (FBI) in any way. [redacted] advised SA
that the strain of *Bacillus anthracis* (Ba) [redacted]

b6
b7C

The strain of Ba cultured from [redacted]

b6
b7C

[redacted] informed writer that [redacted] was going to

b6
b7C

[redacted] also discussed two possibilities why [redacted]
[redacted] DR. BRUCE IVINS, conducted
microbiological contamination surveys in "cold" areas [redacted]

b6
b7C

[redacted] The first was that DR. IVINS did not
follow appropriate standard operating procedures (SOPs) while
working with a "sample" and thought he may have contaminated some

Washington Field Office
Northern Virginia Resident Agency
7799 Leesburg Pike
Falls Church, Virginia

August 17, 2006

Attention: Robert J. Muehlberger
Laboratory Director
U.S. Postal Inspection Service (USPIS)
National Forensic Laboratory
Dulles, Virginia

b6
b7c

RE: To request USPIS National Forensic Laboratory conduct handwriting examination of photographs of biological sample tube labels obtained from the United States Army Medical Research Institute of Infectious Diseases (USAMRIID).

Dear Mr. Muehlberger:

Per your recent conversation with SA [redacted]
[redacted] one (1) cd-rom and 14 prints of the digital images (1A 7012-copies only) are being submitted for handwriting comparison and analysis.

In February, 2002 and in April, 2002, two (2) biological samples of *Bacillus anthracis* were submitted for genetic analysis as part of the ongoing AMERITHRAX investigation, one was submitted to an outside laboratory and the other to the FBI Repository. Upon submission, labels from the tubes were removed by laboratory personnel and placed into a laboratory notebook for record, held inside a Biological Safety Level 3 suite. Due to the significance of the samples from the tubes, it is imperative to the investigation to determine if the same individual wrote the labels and submitted the samples.

Digital photographs of the biological tube labels from the notebook were taken (in order to present the handwriting for forensic analysis) and are being submitted to the USPIS National Forensic Laboratory for handwriting examination. Of specific interest, is a comparison of three (3) labels: one (1) with the writing "Ames Strain RMR 1029

from Dugway (1997) Bruce Ivins 2/27/02" and two (2) with the writing "Dugway Ames Spores - 1997".

No known handwriting exemplars are being submitted at this time. It is requested that the three (3) labels be intercompared and assessed to determine whether or not the same individual prepared the three (3) labels.

For clarification of this request or any additional information, please contact SA [redacted]
[redacted] Thank you in advance for your time and assistance in this matter.

b6
b7C

Sincerely,

[redacted]
Inspector In Charge

b6

279A-WF-222936-SCI24 Serial 5

Enclosure(s): One (1) original two (2) page USPIS Forensic Laboratory Report, Case No. 0884-1348038-DMI(1) - Lab No. 9-119-00594(6), dated 09/28/2006.

Details: In August 2006, the FBI requested the United States Postal Inspection Service (USPIS) Forensic Laboratory conduct handwriting examinations of photographs of biological sample tube labels from a notebook from inside a Biological Safety 3 suite at the United States Army Medical Research Institute of Infectious Diseases (USAMRIID). Of specific interest for analysis was a comparison of three (3) labels: one (1) with the writing "Ames Strain RMR 1029 from Dugway (1997) Bruce Ivins 2/27/02" and two (2) with the writing "Dugway Ames Spores - 1997" to determine if the same writer prepared all three (3) of the labels.

USPIS was provided one (1) cd-rom and 14 prints of digital images of the labels. The cd-rom and prints analyzed by USPIS were returned via U.S. Postal Service Registered Mail, tracking number RB 595 638 165 US, and have been placed in the case file, 1A 7059 for reference along with a copy of the issued report. In addition, the original laboratory report prepared by

EXAMINATIONS

REQUESTED:

Determine whether the hand printed entries depicted in the digital images of labels affixed to SPSTL Sample Set Inventory Form, specifically one that reads "Ames strain RMR 1029 from Dugway Bruce Ivans (1997) 2/27/02", and two that read "Dugway Ames spores - 1997" were written by a common writer.

FINDINGS:

The same writer produced the hand printed entries as described above. In order to identify the writer, known exemplars that repeat the letters and letter combinations found in the questioned writings should be submitted for comparison.

REMARKS:

This examination was conducted at the request of Special Agent [REDACTED] under File No. 279A-WF-222936-LAB and 279A-WF-222936-SCI34.

FEDERAL BUREAU OF INVESTIGATION

Date of transcription 01/12/2007

On 01/11/2007, SA [redacted] transported several items from the FBI Northern Virginia Resident Agency (NVRA) to the U.S. Postal Inspection Service National Forensic Laboratory, Dulles, VA, for handwriting analysis.

SA [redacted] released the items to Robert J. Muehlberger, Director of the USPIS Laboratory. The items are further described as:

- Forty nine (49) photocopied pages of known handwriting of Bruce Ivins
- 1A-7059: Copies of 1A-7012 (cd-rom and fourteen (14) photograph print-outs) of FBI Repository Sample entries at USAMRIID, Bldg 1412 submitted to the U.S. Postal Inspection Service Forensic Laboratory Robert Muehlberger for handwriting comparison
- One (1) cd-rom containing five (5) images of two (2) USPS parcels - one (1) of the parcels is addressed to [redacted] and the other to [redacted]
- Five (5) prints of digital images from cd-rom

The items were submitted for examination under cover of letter of request 279A-WF-222936-SCI24 Serial 8. Muehlberger signed an FD-597 (Receipt for Property) acknowledging acceptance of the evidence and was provided a copy by SA [redacted]. The original FD-597 has been submitted to the 1A section of the case file - 1A 7157.

b6
b7C

PROBLEM:

Determine whether or not the questioned entries appearing in the printed digital images (also contained on CD) of three labels; one depicting the writing "Ames strain RMR 1029 from Dugway Bruce Ivins (1997) 2/27/02" and two depicting the writing "Dugway Ames spores - 1997" were written by Bruce E. Ivins, whose known writings are depicted in the photocopies of various course of business documents.

Determine whether or not the questioned entries appearing in the printed digital images (also contained on CD) of two parcels; one addressed [redacted] and the second addressed [redacted] were written by Bruce E. Ivins, whose known writings are depicted in the photocopies of various course of business documents.

b6
b7C

Determine whether or not the questioned entries appearing on the "anthrax" envelopes and letters (photographic copies retained in the laboratory) were written by Bruce E. Ivins, whose known writings are depicted in the photocopies of various course of business documents.

FINDINGS:

Bruce E. Ivins probably wrote the original of the questioned entries appearing in the printed digital images of the three labels described above.

Bruce E. Ivins probably wrote the original of the questioned address entries appearing in the printed digital images of the two parcels.

Bruce E. Ivins probably did not write the writings appearing on the "anthrax" envelopes and letters.

REMARKS:

The qualified findings expressed above are due to the lack of original documents from which the examination and comparisons were conducted. The submission of the original

questioned and known writings could provide for more definitive findings. In addition, the submission of known exemplars reflecting the writings appearing on the "anthrax" envelopes and letters would need to be examined prior to fully eliminating Bruce E. Ivins as the writer of these questioned writings.

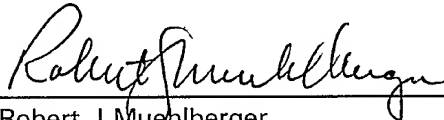

The request for examination was submitted by FBI Special Agent [redacted] under their File Nos. 279A-WF-222936-LAB and 279A-WF-222936-SCI24. This examination is also in reference to U. S. Inspection Service Case No. 0884-1348038-DMI(1).

b6
b7C

EXHIBITS:

The exhibits described in this report of examination, with the exception of the photographic copies of the "anthrax envelopes and letters, were hand carried to the laboratory by FBI Special Agent [redacted] on January 11, 2007. All submitted exhibits are returned with this report.

RE: To request USPIS National Forensic Laboratory conduct handwriting analysis and comparison of known handwriting exemplars of Bruce Ivins with photographs of biological sample tube labels, two (2) U.S. Postal Service (USPS) parcels, and the four recovered 2001 anthrax attack letters and envelopes

Reference: USPIS Forensic Laboratory Report, Case No. 0884-1348038-DMI(1) Lab No. 9-119-00594(6), dated 09/28/2006.

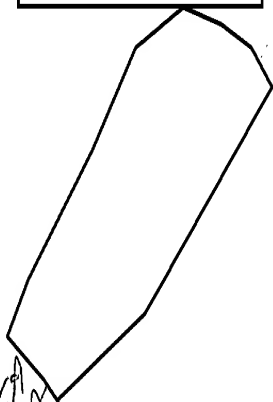

Dear Mr. Muehlberger:

Based on the previous issued report referenced above, it was determined that the same writer produced the hand printed entries depicted in the digital images of three (3) labels: one (1) with the writing "Ames Strain RMR 1029 from Dugway (1997) Bruce Ivins 2/27/02" and two (2) with the writing "Dugway Ames Spores - 1997". At the time of submission, no known handwriting exemplars were provided for comparison. Included under cover of this letter are known handwriting exemplars of Bruce Ivins. It is requested that these known writings be used for comparison to the labels described above. The exhibits, consisting of one (1) cd-rom and 14 prints of the digital images appearing on the cd-rom are being re-submitted for this analysis (279A-WF-222936-1A 7059).

In addition, it is also requested that the known exemplars of Bruce Ivins be utilized for comparison to the color photographs (digital cd-rom of images also provided) of two (2).

070091

SA

b6
b7c

USPS parcels. Five (5) color photographs and a cd-rom containing the images in digital format are being provided for examination.

Lastly, although known samples of Bruce Ivins handwriting have been provided for various comparisons in the past, it is requested that these additional pages of known handwriting samples be utilized and compared to the writings on the original four (4) anthrax attack letters/envelopes.

For clarification of this request or any additional information, please contact SA [REDACTED]

[REDACTED] Thank you in advance for your time and assistance in this matter.

Enclosure(s): One (1) copy of a Cipher, with explanation for use; one (1) copy each of four the four letters and envelopes used in the 2001 anthrax mailings.

Details: Captioned matter is predicated on the anthrax mailings of 2001 to the *New York Post*, Tom Brokaw of NBC News, and U.S. Senators Tom Daschle and Patrick Leahy.

Investigation has determined that a subject of the ongoing AMERITHRAX investigation, BRUCE IVINS, was at one time in possession of a Cipher used by Kappa Kappa Gamma (KKG) to code its ritual information. KKG is a national secret sorority for collegiate women. IVINS has a self-described obsession with the organization, which has been confirmed through investigation and has lead IVINS to steal ritual information, vandalize KKG houses, and post derogatory information about the organization online. Although IVINS claims to have discarded the Cipher, he is very familiar with the document and can accurately describe the code and its application.

Additionally, recent information developed in the investigation indicates that IVINS has a significant interest in

codes. This is highlighted by the fact that he holds the book by Douglas R. Hofstadter, *Godel, Escher, Bach: an Eternal Golden Braid* (GEB), in high regard and has given 'his favorite' book to friends. In part GEB discusses to what extent DNA holds the universal code for life and how the DNA bases [adenine (A), guanine (G), cytosine (C), and thymine (T)] are decoded, via base triplets (codons), into proteins and cellular constituents. Along with GEB an article about the linguistics within DNA was recovered. This article focused on identifying sequences, or patterns of sequences, within DNA which could be used to identify or predict which regions within the DNA contain genes. IVINS also has communicated with Janna Levin author of the novel *A Madman Dreams of Turning Machines*, about mathematician Kurt Godel and cryptographer Alan Turning.

In support of the AMERITHRAX investigation, Laboratory Division, Cryptanalysis and Racketeering Records Unit (CRRU) is requested to conduct all logical analysis of the Cipher and its possible application to the letters and envelopes used in the 2001 mailings. In addition to application of the Cipher to the mailings, CRRU is also requested to consider and advise the AMERITHRAX Task Force of other possible applications of the Cipher to this crime, in light of IVINS's obsession with KKG and interest in codes. Copies of the Cipher are enclosed for use along with copies of the four letters and envelopes. At the request of KKG and with the concurrence of the AMERITHRAX Task Force, all references to KKG have been redacted from the Cipher but do not affect its application.
